Project Requirements

SQL Data Warehouse Project

Requested by Business stakeholders **Platform** PostgreSQL **Teams** Data Engineering Data Analysis

The Project has two parts: first build the data warehouse ,

then build data analytics and reporting on top of it.

Building the Data Warehouse (Data Engineering)

Objective

Develop a modern data warehouse using PgAdmin to consolidate sales data, enabling analytical reporting and informed decision-making.

Specifications

- **Data Sources:** Import data from two source systems (ERP and CRM) provided as CSV files.
- **Data Quality:** Cleanse and resolve data quality issues prior to analysis.
- Integration: Combines both sources into a single, user-friendly data model designed for analytical queries.
- **Scope:** Focus on the latest dataset only; historization of data is not required.
- **Documentation:** Provide clear documentation of the data model to support both business stakeholders and analytics team.

BI: Analytics & Reporting (Data Analysis)

Objective

Develop an SQL based analytics to deliver detailed insights into:

- **Customer Behaviour**
- **Product Performance**
- **Sales Trends**

These insights empower stakeholders with key business metrics, enabling strategic decision-making.
